

Supporting Offshore Renewable Energy

Marine environmental data collection,
management and display
From planning through to operations

Expert Advisors

On all matters relating
to metocean and
environmental
data collection and
management

System Integrators

Rationalising and
simplifying multi-sensor,
multi-system monitoring
networks

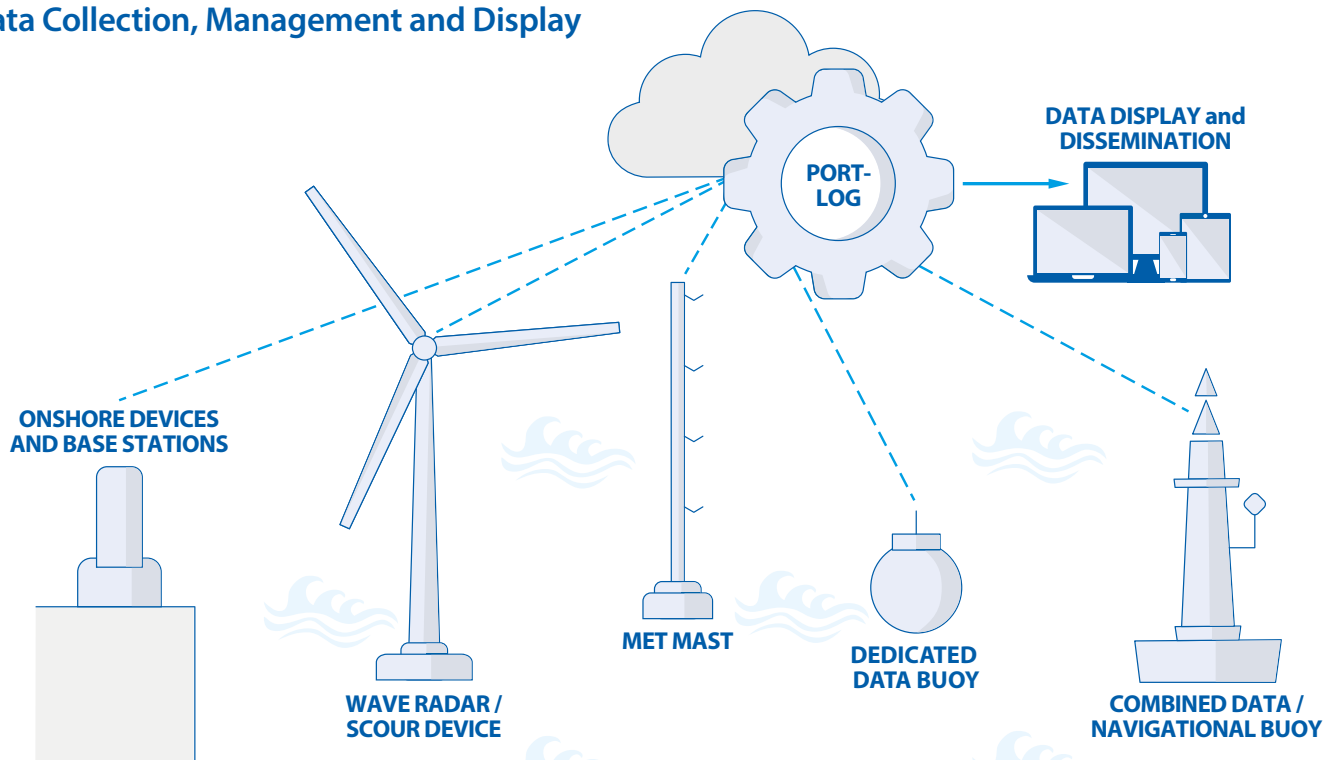

Solution Providers

For data sharing and
publishing, ensuring the
right data, in the right
format, is in the right place,
for the right people

Enjoy the confidence of working with marine data experts

Data Collection, Management and Display

Environmental Monitoring

Your needs

- Monitor all types of metocean and environmental conditions
- Publish, integrate and share metocean and environmental data
- Ensure your team has reliable access to real-time environmental data

Our services and products

- Consultancy and advice
- System design and integration
- Data collection, management and display (Port-Log)
- Smart telemetry modem (ip.buffer)

Clients and Projects

- SeaRoc: Supplying Port-Log to support operational efficiency of offshore projects
- Partrac: Supplying Port-Log to help monitor important changing environmental conditions
- Hydrosphere: Providing a total solution for offshore customers by combining Port-Log with Hydrosphere's Aids to Navigation

Data Management / GIS Training, Consultancy and Governance

Your needs

- Improve data management skills for individuals/teams or company-wide
- Improve knowledge or integration of GIS
- Develop marine data management policy, strategy or systems
- Develop marine spatial data capability and infrastructure

Our services

- Data management training
- Data policy development
- GIS training, integration and implementation

Clients and Projects

- European Marine Energy Center (EMEC): Introduction to Marine Data Management Course, QGIS Training and integration and Metadata management
- IMarEst: Twice yearly Introduction to Marine Data Management Courses for their members and marine professionals

Marine Mapping and Web Map Services

Your needs

- Background mapping for situational analysis and decision-making
- Intelligent data for analysis and planning

Our services

- Raster charts
- Vector Data
- Web Map Services
- ENC Production

Clients and Projects

- Vattenfall: Providing a variety of mapping data for operational planning and decision-making
- Lloyd's Register: Providing a baseline mapping for IRIS (Project Management Platform) which supports a wide variety of offshore projects
- Our data is also supplied via our Licensed Partners (emapsite, FIND, Europa Technologies) providing marine mapping to many organisations within the coastal and offshore renewables sector
